subsidiaries collectively the “Group”, Hong Kong stock code: 757, Taiwan stock code: 9157.TT) is a leading manufacturer of monocrystalline silicon solar ingots and wafers in the People’s Republic of China (the “PRC”). Its products are used for the manufacture of photovoltaic cells which are important components of solar energy generation systems.

During the period under review, the Group was engaged in five main businesses:

- (a) the manufacturing and sales of monocrystalline and multicrystalline silicon solar ingots and wafers;
- (b) the processing of silicon solar ingots and wafers;
- (c) the upgrading and trading of polysilicon;
- (d) the production and sales of photovoltaic cells and modules; and
- (e) the design and installation of photovoltaic systems.

Currently, our integrated business model includes monocrystalline silicon solar ingot production with annual capacity of approximately 800MW, monocrystalline silicon solar wafer production with annual capacity of approximately 600MW, as well as photovoltaic cells and modules productions with annual capacity of approximately 300MW and 100MW, respectively. In addition, the Group operates polysilicon reclaiming and upgrading facilities in Shanghai and Jinzhou.

Upon the completion of the 400MW monocrystalline silicon solar ingot production line in Xining as well as the 500MW multicrystalline silicon solar ingot and wafer production plant in Jinzhou, Solargiga will move a step closer to be the world’s largest monocrystalline silicon solar ingot and wafer producer as well as one of the key players in multicrystalline silicon solar product business through rapid capacity expansion and technology upgrade. The Group also extended its business gradually to downstream photovoltaic cell, module and system installation businesses to realise full vertical integration in photovoltaic industry.

Management Discussion and Analysis

Market Overview

After rapid growth in 2010, the global market demand for solar energy has slowed down since the second quarter of this year. Although energy conservation and emissions reduction as well as the development of clean energy are still regarded as crucial concerns among various countries around the world, numerous governments, particularly those of European countries, have gradually minimised their subsidies to the solar energy industry, resulting in an overall reduction of prices. The gross margins of the industry, however, remain stable due to the decrease in costs, including the costs of raw materials and equipment. Such price adjustment have also helped the solar energy industry to gradually achieve grid parity, which will be beneficial to the widespread use of solar energy and the consolidation of the industry, thereby leading to sustainable development.

The solar energy industry in the United States has still experienced rapid development despite economic uncertainties. According to the statistics from the Solar Energy Industries Association, solar energy remains one of the fastest growing industries in the United States. Capitalising on the market demand and the reduction of costs for solar energy equipment and related factors, during the first quarter in 2011, the United States has added an installed capacity of 252MW to its power grids, representing a growth of 66% over the corresponding period in 2010 and, in aggregate, enabling an installed capacity for solar power generation within its power grid of over 2.85GW, which is sufficient for the provision of electricity for nearly 600,000 families. Although Section 1603 of the American Recovery and Reinvestment Act, should have been expired at the end of 2010, it has been extended to the end of 2011, demonstrating full support from the government of the United States to the development of the domestic solar energy industry, which in turn has motivated the development of the global solar energy industry.

As for the European markets, which are led by Germany and Italy, the feed-in tariff to the solar energy industry has been gradually reduced. Among those markets, Germany, being the world's largest solar energy market, is expected to further reduce the feed-in tariff as its market grows. According to a report prepared by the European Photovoltaic Industry Association, Europe is still playing a dominant role in the global photovoltaic markets with its 30GW installed capacity, which represents 75% of the total installed capacity of solar energy around the world. The solar photovoltaic industry in Europe is actively preparing to conduct industry-related research and development with a fund of EUR1.235 billion in the next three years. Members of the European Union have also undertaken that they will devote full support to the development of the solar energy industry, anticipating that the photovoltaic technologies, with the backup of the relevant capital, will contribute 12% of the power supply to the European Union by 2020.

市場概覽

經過二零一零年的高速增長後，全球太陽能市場需求自本年度第二季起有所減緩。儘管世界各國仍然將節能減排及潔淨能源的發展作為重要議題，但各國政府，尤其歐洲國家均逐步削減對太陽能行業的補貼政策，而行業整體價格亦出現下調情況。然而，由於原材料及設備等成本亦有所下降，行業毛利率維持穩定。價格調整亦有助太陽能行業逐步達致等價，有利於太陽能的普及和行業的整合，朝可持續發展之路邁進。

儘管經濟環境不明朗，美國太陽能行業仍然快速發展。根據太陽能工業協會(Solar Energy Industries Association)的統計資料顯示，太陽能仍然是美國發展最迅速的行業之一。受惠於市場需求及太陽能設備成本下降等情況，於二零一一年第一季，美國新增聯網裝機容量252兆瓦(252MW)，較二零一零年同期增長66%。累計聯網太陽能發電裝機容量逾2.85吉瓦(2.85GW)，足夠為接近600,000家庭發電。此外，原定二零一零年底屆滿的第1603條替代能源補貼法案獲延期至今年年底才結束，顯示美國政府依然大力支持當地的太陽能產業發展，亦為全球太陽能行業帶來鼓勵。

以德國及意大利為首的歐洲市場，逐漸削減對太陽能行業的上網電價，當中德國此全球最大的太陽能市場預期將按市場增長情況，進一步削減上網電價。根據歐洲光伏行業協會(European Photovoltaic Industry Association)的報告，歐洲仍然以30吉瓦(30GW)裝機容量領導全球光伏市場，即佔全球太陽能總裝機容量的75%。歐洲太陽能光電行業亦正積極籌備於未來三年以12.35億歐元的資金進行行業相關研發。歐盟成員國亦已承諾全力支持太陽能產業的發展，預計在相關資金支持下的光伏技術，將會於二零二零年為歐盟貢獻12%的電力供應來源。

Renewable energy in China continues its rapid development. After the nuclear plant crisis in Japan, countries around the world, including China, have re-examined their development plans for renewable energy. Since last year the Chinese government has launched a series of policies relating to solar energy, including a large-scale open tender for 13 solar power plants in the northwestern and Inner Mongolian regions in China, an allocation of RMB50 billion for the funding and support of energy conservation and emission reduction industries, which has resulted in China being ranked as one of the ten top photovoltaic markets in the world. At the National People's Congress held earlier this year, the Chinese government reiterated the strategic importance of renewable energies under the "Twelfth Five-Year Plan" and announced its plan to complete an additional installed capacity of 5GW before the end of the "Twelfth Five-Year Plan". It is expected that China will have a new installed capacity of 750MW to 1GW within this year, enabling the installed capacity of China to reach its first ever GW by 2011.

而在中國，可再生能源持續迅速發展。經過日本核輻射事故後，全球包括中國均重新審視可再生能源的發展規劃。中國政府自去年起推出一系列太陽能相關政策，包括就位於西北及內蒙地區共13個太陽能發電站進行大規模公開招標、以及撥出人民幣500億元的節能減排資金，支持節能減排產業等，使中國晉身為全球十大光伏市場。於今年較早時間舉行的全國人民大會，中國政府再次重申可再生能源在「十二五」規劃的戰略重要性，並計劃於「十二五」結束前完成5吉瓦(5GW)的新增裝機容量。市場預期今年中國新增裝機容量共達750兆瓦(750MW)至1吉瓦(1GW)，令其裝機容量於二零一一年達到首個吉瓦。

Operation Review

Actively expand overall capacity to strengthen market position

During the period under review, the economy of China has remained stable. However, the solar energy market has become more volatile in comparison to the previous year and there has been adjustment to demand, resulting in an overall drop in the prices of solar energy products. Prices within the industry have recorded a relatively significant decrease since April 2011, and have only until June commenced to regain stability. Despite the market fluctuation, the Group has continued to secure orders from customers by virtue of its quality products and technologies. Therefore, the Group has adhered to its expansion plan, capitalised on its advantages and further uplifted its production capacity in order to meet the huge amount of product shipment. As part of the plan, the Qinghai Plant (青海廠房) was completed at the end of August and expected to gradually commence operations shortly thereafter, which will help the Group further consolidate its leading position in the market of the monocrystalline business.

As at 30 June 2011, the Group was equipped with 397 monocrystalline ingot pullers, 83 wiresaws, four multicrystalline casting furnaces, eight

and relatedness.

Group further consolidated its leading position in the monocrystalline business, the Group's

to approximately 217.67MW, representing an increase of 40.3% as compared to 155.15MW in the corresponding period last year. Since completion of the acquisition of the cells business at the beginning of the year, a portion of the silicon solar wafers manufactured was used in the production of solar modules and the remaining was sold. The external shipment volume of the silicon solar wafers and the internal volume of the silicon sales wafers supplied to and required by the cell factories of the Group during the period under review were in aggregate approximately 169.80MW, representing a growth of total shipment volume of 63.2% compared to 104.07MW in the corresponding period last year. The external shipment volume of solar modules and the internal volume of the solar modules supplied to and required by the module factories was in aggregate 90.43MW. No solar modules were produced during the corresponding period last year. Lastly, the shipment volume of solar modules was 15.67MW, representing a growth of total shipment volume of 129.8% compared to 6.82MW in the corresponding period last year.

Enlarging financing channels and promoting innovation and R&D

Facing huge demand from customers, the Group has been increasing its capacity. To ensure there is sufficient working capital for the ongoing development of the business into the future, during the period under review, the Group has been actively exploring financing channels. Leveraging on its good reputation, leading position, comprehensive plan and well-established financial position, the Group has been highly recognised by the banks. On 27 May 2011, a syndicated loan with a facility amount of up to US\$75,000,000 (approximately HK\$581,250,000) for a period of three years was entered into between the Group and its bankers the Industrial Bank of Taiwan, BNP Paribas and other lenders. Subsequently, on 24 August 2011, the Group, with SinoPac Securities (Asia) Limited as its manager successfully issued RMB300,000,000 Bonds with a period to maturity of three years.

集團於回顧期內的太陽能硅片對外付運量及對內供應電池廠所需硅片量，合計約為169.80兆瓦對比去年同期的104.07兆瓦總付運量增長63.2%。而太陽能電池的對外付運量及對內供應組件所需電池片數量合計為90.43兆瓦，去年同期並無太陽能電池產量。最後太陽能組件的付運量為15.67兆瓦對比去年同期的6.82兆瓦，總付運量增長129.8%。

拓寬融資渠道 推進研發創新

面對龐大的客戶需求，陽光能源不斷提升產能。為確保未來持續業務增長所需的營運資金，集團於回顧期內積極拓寬融資渠道。憑藉陽光能源在業內良好的聲譽、領先的行業地位、完整的產業佈局及穩健的財政狀況，深受銀行業青睞。於二零一一年五月二十七日，陽光能源與台灣工業銀行及法國巴黎銀行等銀行以及其他放款人簽訂銀團貸款，授信額度為75,000,000美元（約581,250,000港元），期限三年。其後於二零一一年八月二十四日，陽光能源與永豐金證券（亞洲）有限公司（作為經辦人）順利完成了發行三年期人民幣300,000,000元債券。

Management Discussion and Analysis

管理層討論及分析

In addition, in respect of the manufacturing of monocrystalline silicon solar ingots and wafers, the Group has achieved a leading position in China in terms of its technology, product quality and quantity. The products of the Group are the only monocrystalline silicon solar ingot made cell products in China for which national inspection has been waived. The photovoltaic conversion efficiency of its monocrystalline silicon products is also higher than the industry average. The N-series high-efficiency products of the Group have a photovoltaic conversion efficiency of 22-23%. Currently, the N-series products are mainly silicon solar ingots of 5.5 inches to 8 inches, with a small quantity of N-series silicon solar wafers available for sale, mainly targeted at Japanese customers. During the period under review, the shipment volume of N-series products was approximately 12.2MW, representing around 5.6% of total shipment volume. As for the photovoltaic modules, despite being a new entrant with current production capacity of only 100MW, the Group has had its products successfully admitted into the "Golden Sun Programme" (金太陽工程) of China. An expansion of annual production capacity to 150MW has also been planned, targeting to export the products to the European and North American regions gradually.

Acquiring cells business to realise vertical integration

In the past, the businesses of the Group focused on the manufacture and sales of upstream silicon solar ingots and wafers. Subsequently, the Group started to develop the business of modules and system installations, by which allows the Group to formally enter the downstream sector of the industry. From silicon solar ingots to system installation, the solar cells business is the segment the Group has been missing from the entire solar energy value chain. Therefore, the acquisition of the solar cells business is a vital step for the Group to realise vertical integration in accordance to its business plan.

此外，陽光能源在太陽能單晶硅錠及硅片製造方面不論技術、產品品質及數量方面，在中國均取得領先地位。集團的產品為中國唯一一家太陽能電池用單晶硅錠國家免檢產品，單晶硅的光電轉換率亦較行業水平為高。其中，集團的高效率N型產品更擁有22-23%的光電轉換效率。目前公司N型產品以5.5英寸至8英寸的太陽能硅錠為主，另有小批量的N型硅片銷售，客戶市場以日本為主，回顧期內小型產品付運費約12.2兆瓦(12.2MW)佔總付運量約5.6%左右。至於在太陽能光電組件方面，濰強路孚

During the period under review, with the support of the shareholders, the Group successfully acquired Sino Light Investment Limited (“Sino Light”) on 26 January 2011. Sino Light and its subsidiaries are primarily engaged in the manufacture of solar cells, with a current production capacity of 300MW. Through the acquisition of Sino Light, the upstream and downstream businesses of the Group are linked together, creating synergy. From the date of acquisition being 26 January 2011 to 30 June 2011, the production value of the external shipment volume of Sino Light’s solar cells and the internal volume of Sino Light’s cells supplied to and required by module factories was approximately RMB652.315 million, the quantity of solar cells for external shipment and the internal quantity supplied to and required by module factories, in which profit has been realised, was approximately 90.43MW. It contributed a segment profit of approximately RMB29.752 million, representing a significant percentage of 26.3%, compared to the profit of the Group of RMB113.333 million.

Establishing vertical integration business model and exploring downstream customers

Following a number of development projects undertaken in the recent years, the operations of the businesses of the Group including downstream solar cells, photovoltaic module and system installation have gradually been developed, thus successfully achieving vertically integration of the Group and further strengthening the leading position of the Group in the industry. As the downstream operations are gradually developed, the Group has obtained a number of key orders in China, including the 20MW on-grid photovoltaic power plant project in Golmud, Qinghai Province which was secured at the beginning of July 2011. The construction of the on-grid photovoltaic power plant will be completed by the end of September this year, and the actual on-grid feed in tariff of the project will be RMB1.15 per kWh. The construction of the 13.5MW “Golden Sun Programme” Project (金太陽工程) in Liaoning Province, which was previously awarded to the Group, is expected to be completed within this year. A photovoltaic system programme of 33.5MW in aggregate is projected to be completed by the end of this year. Moreover, Jinzhou Jinmao Photovoltaic Technology Company Limited (“Jinzhou Jinmao”), a subsidiary of the Company has signed a purchase contract with 青海黃河上游水電開發有限責任公司 (“Huanghe Hydropower”), under which, Jinzhou Jinmao has become one of the suppliers of photovoltaic modules for the 250MW on-grid photovoltaic power plant of Huanghe Hydropower in Golmud, Qinghai Province and is expected to provide photovoltaic modules, in aggregate, of approximately 19MW to Huanghe Hydropower from the third quarter in 2011 onwards.

回顧期內，本集團在得到股東的支持下，成功於二零一一年一月二十六日完成收購華光投資有限公司（「華光投資」）。華光投資與其附屬公司主要從事太陽能電池製造業務，目前產能為300兆瓦(300MW)，通過收購華光投

Management Discussion and Analysis

管理層討論及分析

The said on-grid photovoltaic system projects and the module sales contract, as well as the acquisition of Sino Light, a solar cell producer, completed at the beginning of the year, signifies the official completion of vertical integration of the Group. Therefore, the Group has achieved a leading position in the industry of manufacturing monocrystalline silicon solar ingots and wafers. The Group has correctly positioned itself in the areas of downstream modules and system power generation, all of which will in turn be beneficial to the healthy, long-term development of the Group.

During the period, with the enlarged production scale and recognised product quality of the Group from long-term customers, the demand for products of the Group continued to increase and turnover continued to rise.

Cost of sales

For the six months ended 30 June 2011, cost of sales increased by 40.7% to RMB986.885 million from RMB701.164 million for the corresponding period in 2010. Cost of sales represented 77.5% of total turnover, while the unit cost of production continued to improve.

Gross profit and gross profit margin

For the six months ended 30 June 2011, the Group recorded a gross profit of RMB287.261 million and a gross profit margin of 22.5%, representing an increase as compared to the gross profit of RMB95.247 million and a gross profit margin of 12.0% for the corresponding period in 2010.

Selling and distribution expenses

Selling and distribution expenses mainly comprised packaging expenses, freight charges and insurance expenses. Selling and distribution expenses increased by 87.4% to RMB7.968 million for the six months ended 30 June 2011 from RMB4.252 million for the corresponding period in 2010, representing 0.6% of the total turnover of the Group (the corresponding period in 2010: 0.5%).

上述光伏系統電站項目及組件銷售合同，以及年初完成收購生產電池片的華光投資，標誌著集團已正式完成垂直整合計劃，集團於太陽能單晶硅錠及硅片製造取得領先地位，而在下游組件及系統發電業務領域，亦漸上軌道，這一切將有利集團的長遠健康發展。

Administrative expenses

Administrative expenses mainly comprised staff costs and research and development expenses. The administrative expenses for the first half of 2011 amounted to RMB137.781 million, increased by 224.2% as compared to RMB42.504 million of the corresponding period of 2010, representing 10.8% of the turnover of the Group. The increase in administrative expenses was mainly due to a significant increase in research and development expenses from RMB8.551 million in the first half of 2010 to RMB68.210 million in the first half of 2011, as the Company has rapidly expanded its production scale. In addition, the amortisation of intangible assets of RMB13.490 million during the first half of 2011 was due to the acquisition of the solar cell business in 2011 (the corresponding period in 2010: NIL).

Finance costs

The finance costs of the Group increased from RMB8.365 million for the six months ended 30 June 2010 to RMB19.114 million for the six months ended 30 June 2011. Finance costs represented mainly the interest on bank loans and the municipal loans. The increase in finance costs was due to the additional bank borrowings for business expansion and development.

Management Discussion and Analysis

管理層討論及分析

Inventory turnover days

The inventories of the Group comprised mainly raw materials, namely polysilicon, crucibles and other auxiliary raw materials, and finished goods. By means of the expansion in capacity as well as the good relationship with its suppliers, the Group was able to increase its inventory of raw materials when market supply was short. During the period under review, the inventory turnover days of the Group were 102 days (the corresponding period in 2010: 129 days), and decreased by 27 days from the corresponding period in the previous year. The optimal inventory levels of the Group should be sufficient for approximately three months' consumption in the case of polysilicon and one month consumption for other auxiliary raw materials.

Trade receivable turnover days

For the first half of 2011, the trade receivable turnover days of the Group decreased to 38 days (the corresponding period in 2010: 50 days). The number of turnover days is at a low level, and is within the credit period granted to other customers by the Group. Generally, the Group allows a credit period of 30 to 90 days for its customers.

Trade payable turnover days

Due to the global supply for polysilicon raw materials being limited, and the consumption of polysilicon raw materials of the Group increasing, the percentage of prepayment for purchasing raw materials from the Group to the suppliers has increased. Accordingly, trade payable turnover days during the period under review decreased to 32 days (the corresponding period in 2010: 48 days).

存貨週轉日

本集團的存貨主要包括原材料(即多晶硅、坩堝及其他輔料)及製成品。憑藉擴充產能及與供應商的良好關係,本集團在市場缺料時能夠將原材料存貨量調高。於回顧期內,本集團存貨周轉期為102日(二零一零年同期:129日),與去年同期相比減少27日。本集團存貨的最佳水平應為多晶硅足夠使用約三個月及其他輔料足夠使用一個月。

應收貿易賬款週轉日

於二零一一年上半年,集團應收貿易賬款週轉日縮短至38日(二零一零年同期:50日)。周轉日數處於低水平,介乎本集團授予其客戶的信貸期內。本集團一般授予其客戶30至90日的信貸期。

應付貿易賬款週轉日

由於全球多晶硅原材料供應有限,以及本集團的多晶硅原材料使用量上升,令本集團向供應商預付貨款購買原材料的比例增加,因此,回顧期內的應付貿易賬款周轉日縮短至32日(二零一零年同期:48日)。

Liquidity and financial resources

The principal sources of working capital of the Group during the period under review were cash flows from bank borrowings. As at 30 June 2011, the current ratio (current assets divided by current liabilities) of the Group was 1.44 (31 December 2010: 1.38). The Group had net borrowings of RMB1,001.340 million as at 30 June 2011 (31 December 2010: RMB202.259 million), including cash in bank and on hand of RMB679.355 million (31 December 2010: RMB459.734 million), pledged deposits of RMB135.808 million (31 December 2010: RMB74.113 million), bank loans due within one year of RMB942.374 million (31 December 2010: RMB648.011 million), non-current bank loans of RMB870.926 million (31 December 2010: RMB85.000 million) and non-current municipal loan of RMB3.203 million (31 December 2010: RMB3.095 million). Net debt to equity ratio (net debt divided by total equity) was 42.8% (31 December 2010: 12.3%). Such ratios show that the financial position of the Group has remained healthy.

Contingent liabilities

As at 30 June 2011, the Group had no contingent liabilities.

Foreign currency risk

The Group is exposed to foreign currency risk primarily through sales and purchases and cash and bank deposits that are denominated in a currency other than the functional currency, Renminbi, of the operations to which they relate. The currencies giving rise to this risk are primarily the US Dollar, Euro and Hong Kong Dollar. The Directors do not expect any significant impact from the change in exchange rates since the Group uses foreign currencies received from customers to settle the amounts due to suppliers. In addition, the Directors ensure that the net exposure is kept at an acceptable level by purchasing or selling the US Dollar and Euro at spot rates where necessary to address short-term imbalances.

Human resources

As at 30 June 2011, the Group had 3,548 (30 June 2010: 1,530) employees. The significant increase of employees was mainly due to preparation for the production scale capacity expansion in Jinzhou, Liaoning and Xining, Qinghai.

Management Discussion and Analysis

管理層討論及分析

Being the leading enterprise focusing on solar energy in China, the Group will endeavour to make use of the following strategies so as to accelerate its future development:

Continuing capacity expansion to achieve economies of scale

Cost advantage is the key to success given the rigorous competition among solar energy enterprises. In view of the vast market demand and the intensified competition environment, the Group strives to reinforce its leading position as a manufacturer of monocrystalline silicon solar ingots and wafers, and to expand its capacity through organic growth and mergers and acquisitions, while proactively improving the operational efficiency of its own plants, so as to achieve economies of scale and in turn further enhance its cost advantage. At the end of August this year, the first phase of our new plant in Qinghai was officially established. It is anticipated that the commencement of operations will improve the Group's annual capacity of monocrystalline silicon solar ingots. Coupled with the original plan of capacity expansion and production enhancement of the Jinzhou Plant, it is expected that by the end of 2011, the annual

No provision for Hong Kong Profits Tax has been made as the subsidiaries of the Group either did not have any assessable profits subject to Hong Kong Profits Tax or have accumulated tax losses brought forward from previous years to offset the estimated assessable profits for the period.

Except for Jinzhou Yangguang Energy Co., Ltd. which is entitled to a preferential Corporate Income Tax ("CIT") rate of 15%, as it was granted by the Taihe District State Tax Bureau the status of a "High and New Technology Enterprise", and Jinzhou Huachang Photovoltaic Technology Company Limited, which is entitled to a preferential CIT rate of 12.5%, the provision for CIT is calculated based on a statutory rate of 25% of the assessable profits of the subsidiaries in the PRC as determined in accordance with the relevant income tax rules and regulations of the PRC.

Under the CIT Law of the PRC and its relevant regulations, dividends receivable by non-PRC corporate residents from PRC enterprises are subject to withholding tax at a rate of 10% or 5% for earnings accumulated beginning on 1 January 2008. Accordingly, a provision for withholding tax in respect of certain undistributed profits from the PRC subsidiaries has been made and included in the deferred tax liabilities as at 30 June 2011 and 31 December 2010.

(b) Convertible bonds

As stated in note 22, on 26 January 2011, the Group acquired a 100% equity interest in Sino Light, satisfied by the issuance of zero-coupon convertible bonds of the Company with a principal amount of HK\$835,200,000. The convertible bonds were interest-free and would be converted by the bondholders at a conversion price of HK\$1.92 per ordinary share of the Company during the conversion period from 28 March 2011 to 26 January 2013. Upon conversion in full of the convertible bonds, an aggregate of 435,000,000 ordinary shares of the Company would be issued by the Company.

The number of shares into which the convertible bonds would be converted was fixed at the issuance date and the convertible bonds were interest-free and not redeemable in cash. The convertible bonds were classified entirely as equity of the Company and the fair value of RMB644,281,000 at the issuance date was recognised in equity in the other reserve.

The fair value of the convertible bonds was valued by the directors at the issuance date with reference to a valuation report issued by an independent professional valuer, Censere Holdings Limited. The estimate of the fair value of the convertible bonds was measured by applying the Binomial Option Pricing Model, with the following key assumptions:

Spot price at issuance date	HK\$1.81
Option life	2 months
Expected volatility	33.44%
Risk-free interest rate	0.27%
Expected dividend yield from issuance date to commencement date of conversion period	0.00%

All of the convertible bonds were converted by the bondholders into ordinary shares of the Company on 21 June 2011. The nominal value of these shares of RMB36,127,000 was transferred from other reserve to share capital and the difference between the nominal value of these shares and the fair value of the convertible bonds, which amounted to RMB608,154,000, was transferred from other reserve to share premium.

22. Business combination

- (a) On 26 January 2011, the Group acquired 100% equity interest in Sino Light, satisfied by the issuance of zero-coupon convertible bonds of the Company which would be converted into 435,000,000 ordinary shares of the Company. The fair value of these convertible bonds on 26 January 2011 was HK\$762,104,000 (equivalent to RMB644,281,000) (see note 20(b) for details). Sino Light and its subsidiaries (the "Sino Light Group") are engaged in the manufacturing and trading of monocrystalline silicon solar cells. The acquisition of the Sino Light Group allows the Group to expand into the downstream of the solar industry.
- (b) The total turnover and net profit for the period contributed by the Sino Light Group for the period from its date of acquisition to 30 June 2011 were RMB226,370,000 and RMB29,752,000, respectively.

If this business combination had occurred on 1 January 2011, the Group's turnover and net profit for the period would have been approximately RMB1,312,649,000 and approximately RMB110,668,000, respectively. These amounts have been calculated by adopting the Group's accounting policies, eliminating the related intercompany transactions and adjusting the results of the relevant subsidiaries to reflect the additional amortisation and depreciation that would have been charged assuming the fair value adjustment to intangible assets, property, plant and equipment and lease prepayments have been applied from 1 January 2011, together with the consequential tax effects.

22. 業務合併

- (a) 於二零一一年一月二十六日，本集團購入華光全部股本權益，並透過發行本公司之零息可換股債券付款，該等債券可兌換為435,000,000股本公司普通股。該等可換股債券於二零一一年一月二十六日之公平值為762,104,000港元，相當於人民幣644,281,000元（請參閱附註20(b)，以瞭解詳情）。華光及其附屬公司（「華光集團」）從事太陽能單晶硅電池之製造及買賣業務。收購華光集團可讓本集團擴大至太陽能行業之下游業務。
- (b) 華光集團期內貢獻之總營業額及純利自有關收購日期起至二零一一年六月三十日止期間分別為人民幣226,370,000元及人民幣29,752,000元。

倘有關業務合併於二零一一年一月一日已發生，則本集團期內之營業額及純利將分別約人民幣1,312,649,000元及約人民幣110,668,000元。計算有關金額時已採納本集團之會計政策，抵銷公司間之有關連交易，並調整相關附屬公司業績，以反映假設對無形資產、物業、廠房及設備以及租賃預付款項之公平值調整自二零一一年一月一日起已應用時原先應已收取之額外攤銷及折舊連同相應稅務影響。
